

Carbon Reduction Plan

Supplier name:Context Health Ltd

Publication date:August 2024

Commitment to achieving Net Zero

Context Health Ltd is committed to achieving Net Zero emissions by 2035.

Baseline Emissions Footprint

Baseline emissions are a record of the greenhouse gases that have been produced in the past and were produced prior to the introduction of any strategies to reduce emissions. Baseline emissions are the reference point against which emissions reduction can be measured.

Baseline Year: 2024	
Additional Details relating to the Baseline Emissions calculations.	
As Context Health Ltd is in the process of establishing our baseline emissions for the year 2024, we do not yet have quantified figures for Scope 1, Scope 2, or Scope 3 emissions. These will be calculated as part of our emissions assessment, which is currently in development. The total emissions figures will be provided in our next reporting period. For this reporting period, the figures are marked as 'TBC' until data collection is complete. We are committed to reporting total emissions in future reporting periods once this data has been gathered and verified.	
Baseline year emissions:	
EMISSIONS	TOTAL (tCO₂e)
Scope 1	TBC
Scope 2	TBC
Scope 3 (Included Sources)	TBC
Total Emissions	TBC

Current Emissions Reporting

Reporting Year: 2024	
EMISSIONS	TOTAL (tCO _{2e})
Scope 1	TBC
Scope 2	TBC
Scope 3 (Included Sources)	TBC
Total Emissions	TBC

Emissions reduction targets

As this is the first carbon footprint assessment for Context Health Ltd, we are establishing our carbon reduction targets. In line with our commitment to achieving **Net Zero by 2035**, we have adopted the following targets:

From an estimated total carbon emissions of **100 tCO_{2e}**, we project that our carbon emissions will decrease over the next five years to **62 tCO_{2e}** by **2029**. This represents a reduction of **38%** compared to our baseline year of 2024.

We are committed to reducing emissions by approximately **9.09% annually** to reach **Net Zero** by 2035. These targets will be achieved through energy efficiency measures, transitioning to renewable energy sources, and optimising our operational processes, and they will be reviewed annually to reflect progress

Carbon Reduction Projects

As we are in the early stages of developing our Carbon Reduction Plan, **Context Health Ltd** has not yet implemented significant carbon reduction projects since our **2024 baseline**.

We are however, committed to continuously improving our environmental impact and are actively working on establishing key initiatives. Our cloud-based platform hosted on **Microsoft Azure**, which operates with a strong focus on renewable energy and sustainable infrastructure, contributes to our overall environmental strategy. We have also implemented remote work policies, reducing the need for employee commuting and business travel.

Additionally, our core product, **ContextMDT**, is a virtual MDT platform that directly contributes to carbon reduction. By enabling healthcare teams to collaborate remotely, **ContextMDT** eliminates the need for physical travel, reduces energy consumption associated with in-person meetings, and cuts down on paper usage, making healthcare collaboration more sustainable.

Future Carbon Reduction Initiatives:

In the future, we plan to implement further measures, including:

- Achieving **ISO 14001 certification**, which we are actively working towards, to ensure a robust environmental management system.
- Transitioning to a **fully renewable energy supply** for our office space.
- Reducing our **Scope 3 emissions** by minimising business travel and encouraging remote meetings and digital collaboration.
- Implementing **energy-efficient lighting (LED/PIR controls)** in our office.
- Monitoring and reducing the carbon footprint of our **SaaS platform** by partnering with Microsoft Azure to use its sustainability tools and achieve carbon-neutral hosting.

Declaration and Sign Off

This Carbon Reduction Plan has been completed in accordance with PPN 06/21 and associated guidance and reporting standard for Carbon Reduction Plans.

Emissions have been reported and recorded in accordance with the published reporting standard for Carbon Reduction Plans and the GHG Reporting Protocol corporate standard¹ and uses the appropriate Government emission conversion factors for greenhouse gas company reporting².

Scope 1 and Scope 2 emissions have been reported in accordance with SECR requirements, and the required subset of Scope 3 emissions have been reported in accordance with the published reporting standard for Carbon Reduction Plans and the Corporate Value Chain (Scope 3) Standard³.

This Carbon Reduction Plan has been reviewed and signed off by the board of directors (or equivalent management body).

Signed on behalf of the Supplier:

Ranjan Thilagarajah, CEO
